aishu08080@gmail.com | +919845968665 | <https://www.linkedin.com/in/aishwaryasuresh28>

PROFILE SUMMARY

Motivated engineering student with strong fundamentals in Python programming, HTML, CSS, and JavaScript. Good understanding of software development concepts, problem-solving, and logical thinking. Familiar with basic IoT systems and network communication protocols. Seeking an entry-level software development role to apply coding skills, contribute to innovative solutions, and grow in a professional environment.

EDUCATION

Bachelor of Engineering in Electronics and communication Engineering

P E S College Of Engineering, Mandya, Karnataka
2025-2026 | **CGPA:** 6.9

Diploma in Electronics and communication Engineering

Government CPC Polytechnic ,Mysore, Karnataka
2022-2023 | **Percentage:** 71.60%

10th (State Board)

Lucky High School, Mysore, Karnataka
2020 | **Percentage:** 71.36%

SKILLS

- **Programming Languages:** Python, HTML, CSS, JavaScript, ReactJS
- **Soft Skills:** Analytical Thinking, Teamwork, Communication, Time Management, Adaptability

PROJECTS

IoT-Based Railway Track Discontinuity and Object Detection System

- Developed a safety monitoring system to detect cracks and obstacles on railway tracks using IoT sensors.
- Used vibration and ultrasonic sensing to identify discontinuities and obstructions.
- Transmitted alerts wirelessly through GSM for real-time monitoring and accident prevention.

Knee Osteoarthritis Detection and Classification Using X-Rays

- We built a model using Mobile Net that looks at knee X-ray images and detects osteoarthritis.
- We cleaned and prepared all the X-ray images so the model can learn the patterns
- We trained the model and checked its accuracy to make sure it can correctly classify knee osteoarthritis.

INTERNSHIPS

Industrial IoT Intern – Automotive Axles Limited, Mysore

AUTOMOTIVE AXLES LIMITED, MYSORE | Duration: 154 Hrs | may–june 2025

- Gained exposure to IoT sensors used in conveyor and PLE (Plant Level Engineering) workshops.
- Learned about sensor integration for monitoring industrial processes and material movement.
- Understood real-time data collection and condition monitoring in an Industry 4.0 setup.
